

The Therapeutic Benefits of Far Infrared and Negative Ion Therapy

Written by Jim Gabriel, LMT, SET, NMT, BA

"Give me fever and I can cure every disease"

Hippocrates was speaking to us 2300 years ago in reference to the Greeks' use of hot baths to induce fever to fight disease. Pyrotherapy (pyro=fire) is the term that describes procedures that induce artificial fevers to fight disease including the injection of sodium chloride and various vaccines.

In the 1900's, osteopaths used heating tanks to induce fever. Physicians today use a theratron to fight infectious disease and even to treat cancer in conjunction with small doses of anti-cancer drugs. However, this treatment leaves low grade burns and localized pain behind.

Enter the BIOMAT

In 1997, the Richway Corporation, Fuji BioScience and Texas Instruments, developed and produced an amazing medical device --- the Far Infrared/Amethyst BIOMAT. This was done using the scientific discoveries of NASA's health research regarding far infrared rays and knowledge of the superior conducting properties of amethyst and tourmaline to generate negative ions. This led to the creation of a state of the art instrument with the ability to send healing infrared light 6"-8" into the tissues while at the same time infusing the body with fortifying negative ions. The choice was made to put the far infrared technology and the amethyst/tourmaline crystals into a comfortable mat that one would simply lie down and rest or sleep upon.

Far infrared rays are anti-viral, anti-bacterial and anti-fungal and can therefore be beneficial in the treatment of a variety of diseases. Negative ions are instrumental in balancing the metabolism by activating healthy enzyme function in the cells of the body. They assist in creating the proper alkaline environment in body chemistry, in the excretion of cellular waste, in nutrient absorption and in boosting immunity and balancing hormonal functions. Further, negative ions are necessary to balance serotonin levels in the brain, assist in proper sleep, help detox heavy metals. They are anti-inflammatory, dissolve cysts and fat globules, aid circulation and raise internal body temp to normal, reduce edema, move lymph and stimulate endorphin production which relieves pain, stress and anxiety and keeps the musculoskeletal system elastic!! This technology presents itself as a solution to a myriad of healthcare problems.

Envision yourself comfortably relaxing on the BIOMAT as the warming, soothing infrared rays pass through the

layers of amethyst/tourmaline, permeating their healing light energy deep within your body bringing with it the negative ions so vital to life itself.

The American Medical Association says inflammation is underlying cause of most disease. Studies are continuing to document the healing benefits of "hot gemstone therapy", negative ions being superconducted with far infrared rays -- as in the BIOMAT. With medical expenses going soaring and contagious diseases and cancer becoming epidemic, this self care technology presents a solution for the twenty first century. The BIOMAT can help us endure and even thrive.

The makers of the BIOMAT wanted it to be taken seriously as an aid to healing and spent a million dollars to have it go through the rigors of the FDA process to become an FDA approved medical device. In Japan, Dr. Nobuhiro Yoshimizu, M.D. PhD, the Director of Yokohama General Hospital, has authored, "The Fourth Treatment for Medical Refugees - Thermotherapy in the New Century" which documents his pioneering work using the BIOMAT in his breakthrough protocols to successfully treat cancer. This healing modality is being used in six Japanese hospitals and getting great results!

According to Dr. Yoshimizu's research, the infrared light within the mat heats to 158 degrees but does not burn healthy tissue and is comfortable to the body, which disperses the heat. The head is kept cool by the use of an amethyst pillow which is not heated. Conversely, the malignant tumor cells don't have enough vascularity to disperse the heat and so they become hotter than healthy tissue. Tumor cells tend to be more acidic and are more heat sensitive. Therefore, when the temperature of the body is increased to more than 42 degrees Celsius, just under 108 degrees Fahrenheit, cancer cells are more likely to die naturally.

Repetitive treatments of resting or sleeping on the BIOMAT for 40 minutes to an hour will cause cancer cells to weaken, quit reproducing and even die. Healthy cells thrive under the heat and produce an interferon like substance that also inhibits tumor growth. In Japan, physicians employ only a 10% to 20% dose of anti-cancer drugs or very low dose radiation because the tumors are already weakened. They are able to cure 70% of Stage 4 cancer in healthy individuals, those who are able to walk and eat well with nutritional protocols, infrared and negative ion therapy through the BIOMAT, low dose radiation and chemotherapy.
